
Teeny TINY WORLDS

Rediscovering Science

Activity: Create a one square foot investigation plot to look for the tiny plants and animals that live around us.

1. Find a spot outside with grass, soil, or a mixture of both.
List three things you may find in the area.

Supplies

Ruler
String (5 feet)
4 stakes or sticks

2. Use your ruler to measure a square that is 1 foot by 1 foot. Place a stake at each corner.
3. Wrap the string around the stakes to create the edges of your investigation plot.
4. Closely observe your plot for at least 5 minutes. Record your data on the next page, "My Data." Collecting data is important in investigations!
5. Optional: Create another investigation plot and compare your findings between the plots.

An example of
how to setup your
investigation plot.

Thank you
